

Vehicle Parking App - V1 : Project Report

Author

Rohan Kumar

Description

A web-based vehicle parking app with Admin and User roles.

AI/LLM Used: 5% (formatting and guidance only).

Technologies used

Flask, flask_sqlalchemy, SQLite, HTML, Bootstrap, Jinja2.

Used for backend routing, ORM, and responsive UI.

DB Schema Design

- User(id, username, fullname, password, address, pin_code)
- Admin(id, username, password)
- ParkingLot(id, location_name, address,)
- ParkingSpot(id, lot_id, spot_number, is_available)

API Design

APIs for login, register, book, and release using Flask routes.

YAML submitted separately.

Architecture and Features

Single-file Flask app with templates and Bootstrap UI.

Features: login, booking, release, dashboards, search.
